

On track
with technology.

RapidFixed

RapidFixed features a “fixed” or permanent installation that requires a single augured hole. With a 30’ above ground mast it is ideal for high density deployments of containers and locomotives. This sleek solution offers a quick, cost-effective deployment that eliminates the need for additional infrastructure. Furthermore, RapidFixed incorporates many cutting-edge technologies, including energy and environmental management systems developed in-house.

PROBLEM

The high cost of trenching power and communications lines can far exceed the cost of wireless hardware. Using existing poles is rarely an option due to lighting and locations.

SOLUTION

Our Rapid Deploy team has deployed RapidFixed at numerous Intermodal facilities. In record time, all locations were operational, monitored 24/7 and maintained by Buckeye Mountain.

KEY BENEFITS

RUGGED

Designed for continuous operation in all weather conditions and incorporates vibration dampers required on rail facilities.

RAPID

Deploys and becomes fully operational in days – not months.

COST EFFICIENT

Slashes capital expenditures by eliminating the need for vertical assets, network and power infrastructure, while significantly reducing time and labor costs.

EXPANDABLE

Increase your coverage quickly and cost-efficiently by simply adding additional units.

FLEXIBLE

Supports optional IP cameras and other wireless modes of operation.

SUSTAINABLE

Preserves the earth's natural resources by relying on solar power, and aligns with any “green-friendly” initiatives.
